

# RENEWABLE ENERGY

# RENEWABLE ENERGIES

Renewable energies are a source of clean energy that helps protect the environment. Its use helps fighting long term effects of pollution and fossil fuel dependence.

Clean energy development is mandatory to fight climate change as it limit its most devastating effects.

## ADVANTAGES OF RENEWABLE ENERGIES

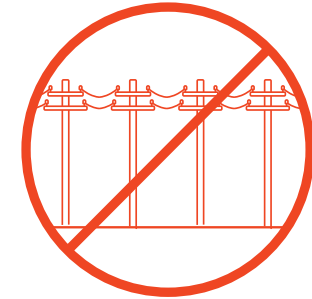

### 100% NATURAL AND ECOLOGICAL

Solar energy can make our lives simpler, allowing for less pollution and taking advantage of a 100% natural resource.

### ECONOMIC SAVINGS

Save money as technology advances, while fossil fuels cost increases as time passes, since they are more scarce every day.

### NO ELECTRICAL LINES

Solar energy is ideal for areas where there is no electrical grid (rural areas, mountains, islands) or where its distribution is difficult or too expensive.

# SOLAR ENERGY

Photovoltaic solar energy can produce electricity. Thermal solar energy is used to produce heat for cooking, sanitary hot water and heating, and thermoelectric energy is used to generate electricity and heat, mainly for industrial processing.

# PRODUCTS AND SOLUTIONS

- ✓ We provide all supplies for renewal energy generation.
- ✓ We design and execute turn-key projects of any capacity in residential, commercial and governmental levels.
- ✓ On-Grid, Off-Grid & Hybrid systems.
- ✓ Solar Street Lights and as well as public solar lighting solutions. (Govt.)
- ✓ Solar water pumping systems.

**OUR PRESENCE IN CHINA AND THE AMERICAS WILL GIVE YOU  
PEACE OF MIND DURING THE PROCESS OF YOUR ORDERS**

WE SUPPLY SOME OF THE MOST POPULAR BRANDS AROUND THE WORLD
